

Press Release – It's Beginning to Look a Lot Like Christmas for Digislide

20th December 2012

This month has seen the resurgence of Digislide with several shipments of handheld projectors, companion projectors and gaming projectors arriving in Adelaide.

stage.

Handheld projectors include the popular digishow™ and Ray® projectors, and the WeSii™, which was “born global” having won the coveted iAward from the Australian Information Industry Association while in prototype

Designed as a companion projector to the Nintendo Wii™, WeSii™ will team with the WeSii™ audio system enabling the gaming anywhere.

An infrared curtain has been designed into the WeSii™ audio system, so there's no need for the fragile Wii™ sensor bar to travel. Furthermore, the inbuilt infrared curtain has an expanded reach, allowing individual players to spread further out and use more physicality.

The great news for owners of digishow™ is that it is compatible with, and can dock into the WeSii™ audio system, which can be bought separately.

The WeSii™ projector and audio docking system puts a **Home Theatre in Your Hand™**, as it enables the consumer to project images™ from their smart phone, DVD, digital camera or any games console with a composite video interface. The WeSii™ speakers fold out to sit flat on a table when interfacing with other products

So, the great news for caravan and mobile home owners, is that they can interface WeSii™ with a set top box, and have light weight, robust, large screen TV reception or projected images anywhere they want to go! WeSii™ really sets the Wii™ free from the TV!

The popular Sii™, StingRay™ and XRay 480™ ultra portable SVGA projectors, designed to complement the Nintendo Wii™, Sony Playstation™ and Microsoft Xbox™ have also arrived this month. These projectors are built around Texas Instrument technologies, have a robust LED light source and require no warm up/cool down period. They're Plug and Play! and Show and Go!

With a 150 lumens output for a guaranteed 30,000 hours, these projectors are absolutely ideal for gamers, families and group presentations! With DLP technologies, and 480,000 pixel resolution all three products have PC Compatability (VGA, SVGA, XGA, SXGA) and Video Compatibility (NTSC, PAL, SECAM), Auto keystone correction and a range of interfaces (vga, composite video, S video, USB, SD-Card Reader) makes presentations easy.

It's beginning to look a lot like Christmas for all believers in Digislide!
